Research project: States and the Limits of Feasibility: Enforcement, Morality and Possibility

Summary: States make us do things; they enforce our acting in certain ways. What is more, this seems to be an essential element of statehood. My thesis explores arguments for the kind of general and exclusive moral permission to enforce that states claim, and in particular the role that feasibility considerations play in them. I argue that premises about the infeasibility of alternatives to a state's enforcement are essential to the success of any such argument. States' permission to enforce can be justified, if at all, in response to the unfortunate circumstances in which we find ourselves. I develop a general multivocal account of the concept of feasibility, according to which the concept can be made precise in many different ways, no single one of which is obviously privileged as uniquely relevant to moral theory. Given the importance of feasibility to arguments for states' general and exclusive permission to enforce, this account has the consequence of casting doubt on the assumption that such a permission can be taken for granted. Arguments for this permission may succeed when we make their feasibility premises precise in some ways, but not others. Understanding this, I argue, helps illuminate how we ought to think about and treat the state enforcement we face in the real world.
